Pack programme for 5 June 2026

Voyagers of the Blue & Green Sea (Originally written by Julia and Caryn, teaching aids Orsella)
Week 5: Shaping the Coasts & Seabeds

This week is hands-on, messy, curious, and fun, focusing on **how land and sea shape each other**, and helping Cubs understand change, cause and effect, and care for the environment.

Time	Activity	Equipment	Scouter
16:30 (15 min)	Grand Howl **All say the Outdoor Code** **Each member get a card representing a part of the outdoor code and place it in the correct order** **Wildlife, trees, flowers, countryside, roads and ocean** **Bonus In which direction does the sun rise and set?** Duty six: Brown Inspection	Skin, flag, Totem pole, Gems Outdoor code and cards.	Akela
Who can remember what we learned about last week? We have learnt about being helmsmen, how to read charts, different knots and water safety . As sailors we also need to know about our sea's coast and the various shorelines that one gets and the type of sea creatures in the sea.			
16:45 (10 min)	**Steam release game : "Wave Tag"** **Purpose** ● Get Cubs moving ● Introduce the idea of **waves shaping land (waves run from back of hall - when cub tagged then stay still - waves go back and run forward again)** **Setup** ● Mark a playing area. **How to Play** 1. Choose 2–3 Cubs as **Waves**. 2. The rest are **Rocks**. 3. Waves tag Rocks. 4. When tagged, Rocks must: ○ Freeze ○ Slowly "wear away" by crouching lower each time they are tagged again 5. When fully crouched, Rocks become **Sand** and sit down. **The other adult leaders:** Narrate:"The waves keep coming… slowly changing the rocks."	None	Baloo

4 X Base rotations of 13 mins each plus 2 min rotation time = 1hour

BASE1: Now that we have learnt about wind and water erosion let's do an experiment to see how it happens. As sailors we need to be aware of areas of high wind and rough seas around cliffs etc.

16:55-17:55 (4x 13 min)

Type: Six-based creative activity

Hands-On Activity – "Build a Coastline"

National Challenge:* *Task 1.1 Flood in sandpit

SW - task 18 what does conservation mean.

Purpose

- Understand erosion and deposition
- Encourage creativity and teamwork

Setup

- Each Six makes a mountain out of sand/soil.

Ask them to:

- Create a coastline
- Add hills, bays, beaches

Instructions

1. Once built, leader announces "The waves arrive!"
2. Cubs gently:
   - Drip water onto the coast
   - Observe what happens
3. Ask:
   - "Where did the sand go?"
   - "What changed?"

Safety

- No throwing sand
- Gentle water only

After the experiment - talk about what is nature conservation? Nature conservation also includes protecting our shores from sand erosion. Yes, we can not stop the wind or sea but we can plant plants that help the sand stay in place. We can not play on sand dunes. We could also put up shade cloth to protect the sand from moving.

Cubs work in pairs:

Sandy area with, Small stones

Water in 3 cups/ squeegees and a bucket of back UP water.

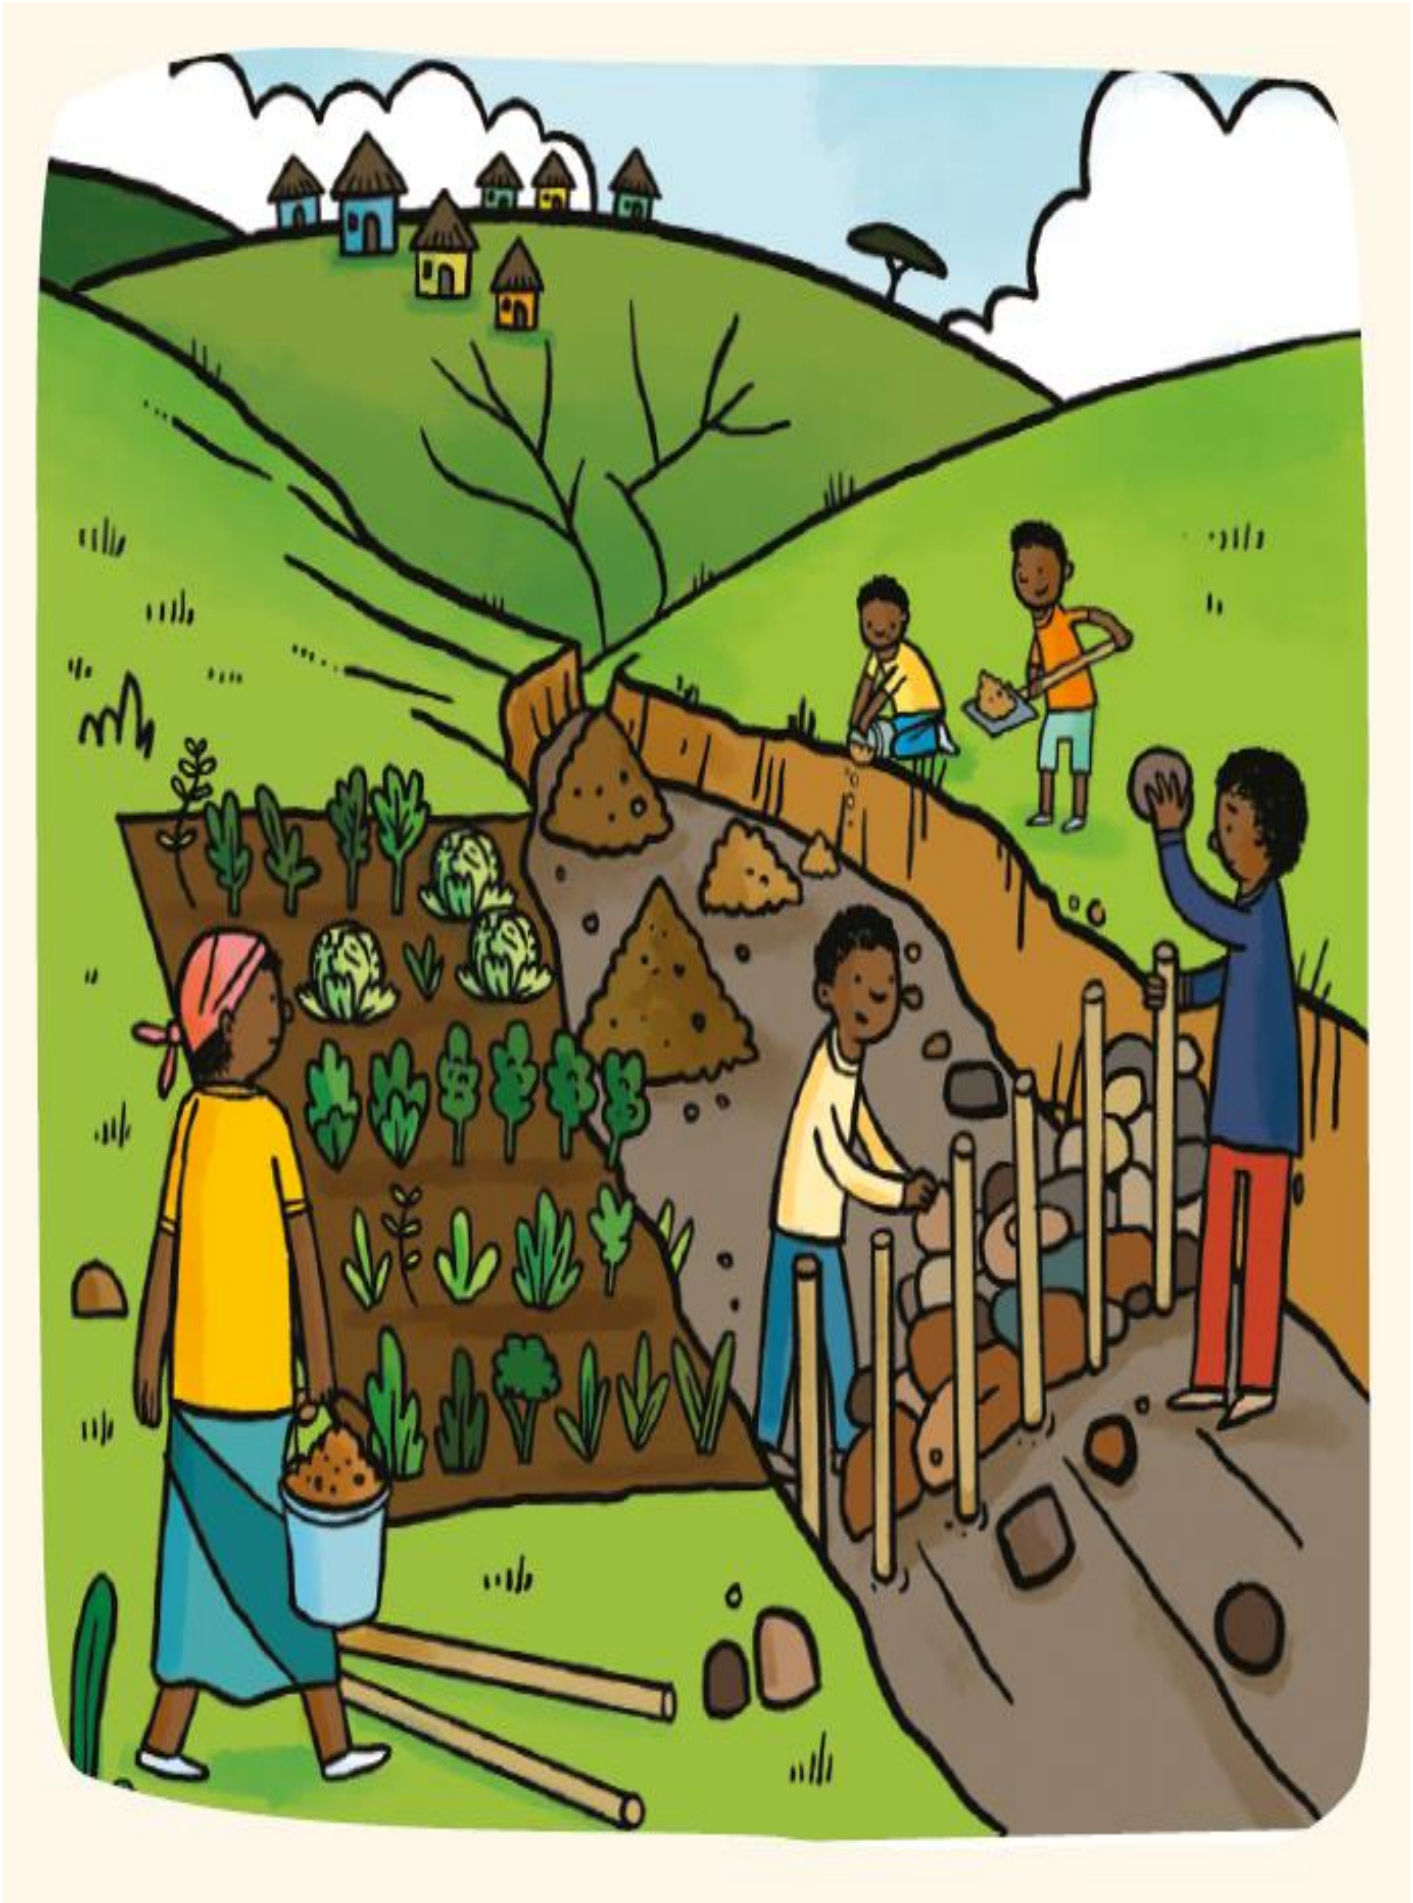

Alpha

BASE 2: As we sail to various cities around the world we can also see another type of erosion on the very old buildings. Do any of you know what that could be? Acid rain erosion.			
16:55-17:55 (4x 13 min)	**Acid Rain Erosion Discussion** **Purpose** ● Show how erosion also happens on land **Setup** 1. Sit the cubs in the sixes 2. Half an egg shell in vinegar and the other half as is. 3. Pictures of acid erosion **Discussion:** Talk about what is an acid (vinegar) and what it can do to an item) egg shell. Pass the egg shells around. Feel the difference between the hard "normal" egg and the soft "chalky" vinegar egg. Talk about how dirty pollution rain is called acid rain and show the pictures of what acid rain does to statues and buildings. (You can place an egg in a jar of vinegar by Tuesday already, usually half an egg shell in vingar and the other half in water)	Pictures of acid erosion Funda Wande story of Mazaka's vegetable garden. Egg shell/ Lettuce Vinegar/ Lemon juice	Akela

BASE 3: Sailors get to explore the big oceans and they get to see lots of different creatures below			
16:55-17:55 (4x 13 min) **Type:** Six-based quiet activity	**Observation Game – "What Lives Below?"** SW 22: Underwater creatures with pooter SW 14: Decipher a code GW 13: Decipher a complex code Put the printed pictures of a sea scene underneath the glass pyrex dish. Add water, sand and leaves into the dish. Cubs look through the pooter and see what sea animal they can see. They then must run to the SW or GW corner and decipher codes. GW - to decipher a pigpen code which will give them a name of one of the sea animals SW - They need to look at what animal they find in the picture. They must then go to the next page and look for the animal and what letter of the alphabet it is. Then find the word " I love the ocean	Picture of sea creatures Pyrex dish Elastic Bottle tubes Book cover plastic Pigpen code GW SW - pages with code on it Pencils	Athene

BASE 4: Even though water and wind can cause erosion and change shorelines, it can also power a sail or float a raft.			
16:55-17:55 (4x 13 min)	Cubs build a simple raft to complete their model boat badge.  	Sticks Masking tape Leaves	Bravo
We are working well as a sailing crew there are even môre to learn , see and do.			
17:55	Closing grand howl Hand out badges: Edward shield, swimmers, Mention Leo's scholar badge Do attendance register	Totem pole Skin Badges Attend register	Baloo

Yarn: The Story of MaZaca's Garden

MaZaca was an old lady. She lived alone next door to Sipho and his grandmother. She had a few cows and a vegetable garden. In her garden, she had planted beans, tomatoes, and cabbage.

One Saturday, she gave Sipho a whole bunch of ripe tomatoes. "All my tomatoes have ripened at the same time. So you must help me eat them," she said.

"Let's make tomato sandwiches for lunch!" said Grandma. Sipho ran off to call Amos, Ayanda, and Precious. "Hi, everyone!" he shouted. "Grandma is going to make tomato sandwiches! Come and eat with us."

They all went to Sipho's house and ate lots of tomato sandwiches. "That was so delicious!" said Ayanda. "How can we say thank you to MaZaca?"

"I know," said Sipho, "we can go and pull out all the weeds in her vegetable garden."

Very quickly, they pulled out all the weeds. "That didn't take long," said Amos. "Let's pull out the weeds on the outside of the garden too, then it will be beautifully clean everywhere! MaZaca is going to be very happy."

That night, there was a storm. The thunder and lightning were so bad that Sipho pulled his pillow over his head. "Don't be afraid, my son," Grandma said, "all this rain will help MaZaca's vegetables grow beautifully."

But the next morning, they heard MaZaca crying. "Yo! Yo! Yo!" she wailed. "My garden is gone!" And she was right. The rain had washed away half of her vegetable garden, right down the path. The cows were busy eating the cabbage in the path.

A Lesson Learned

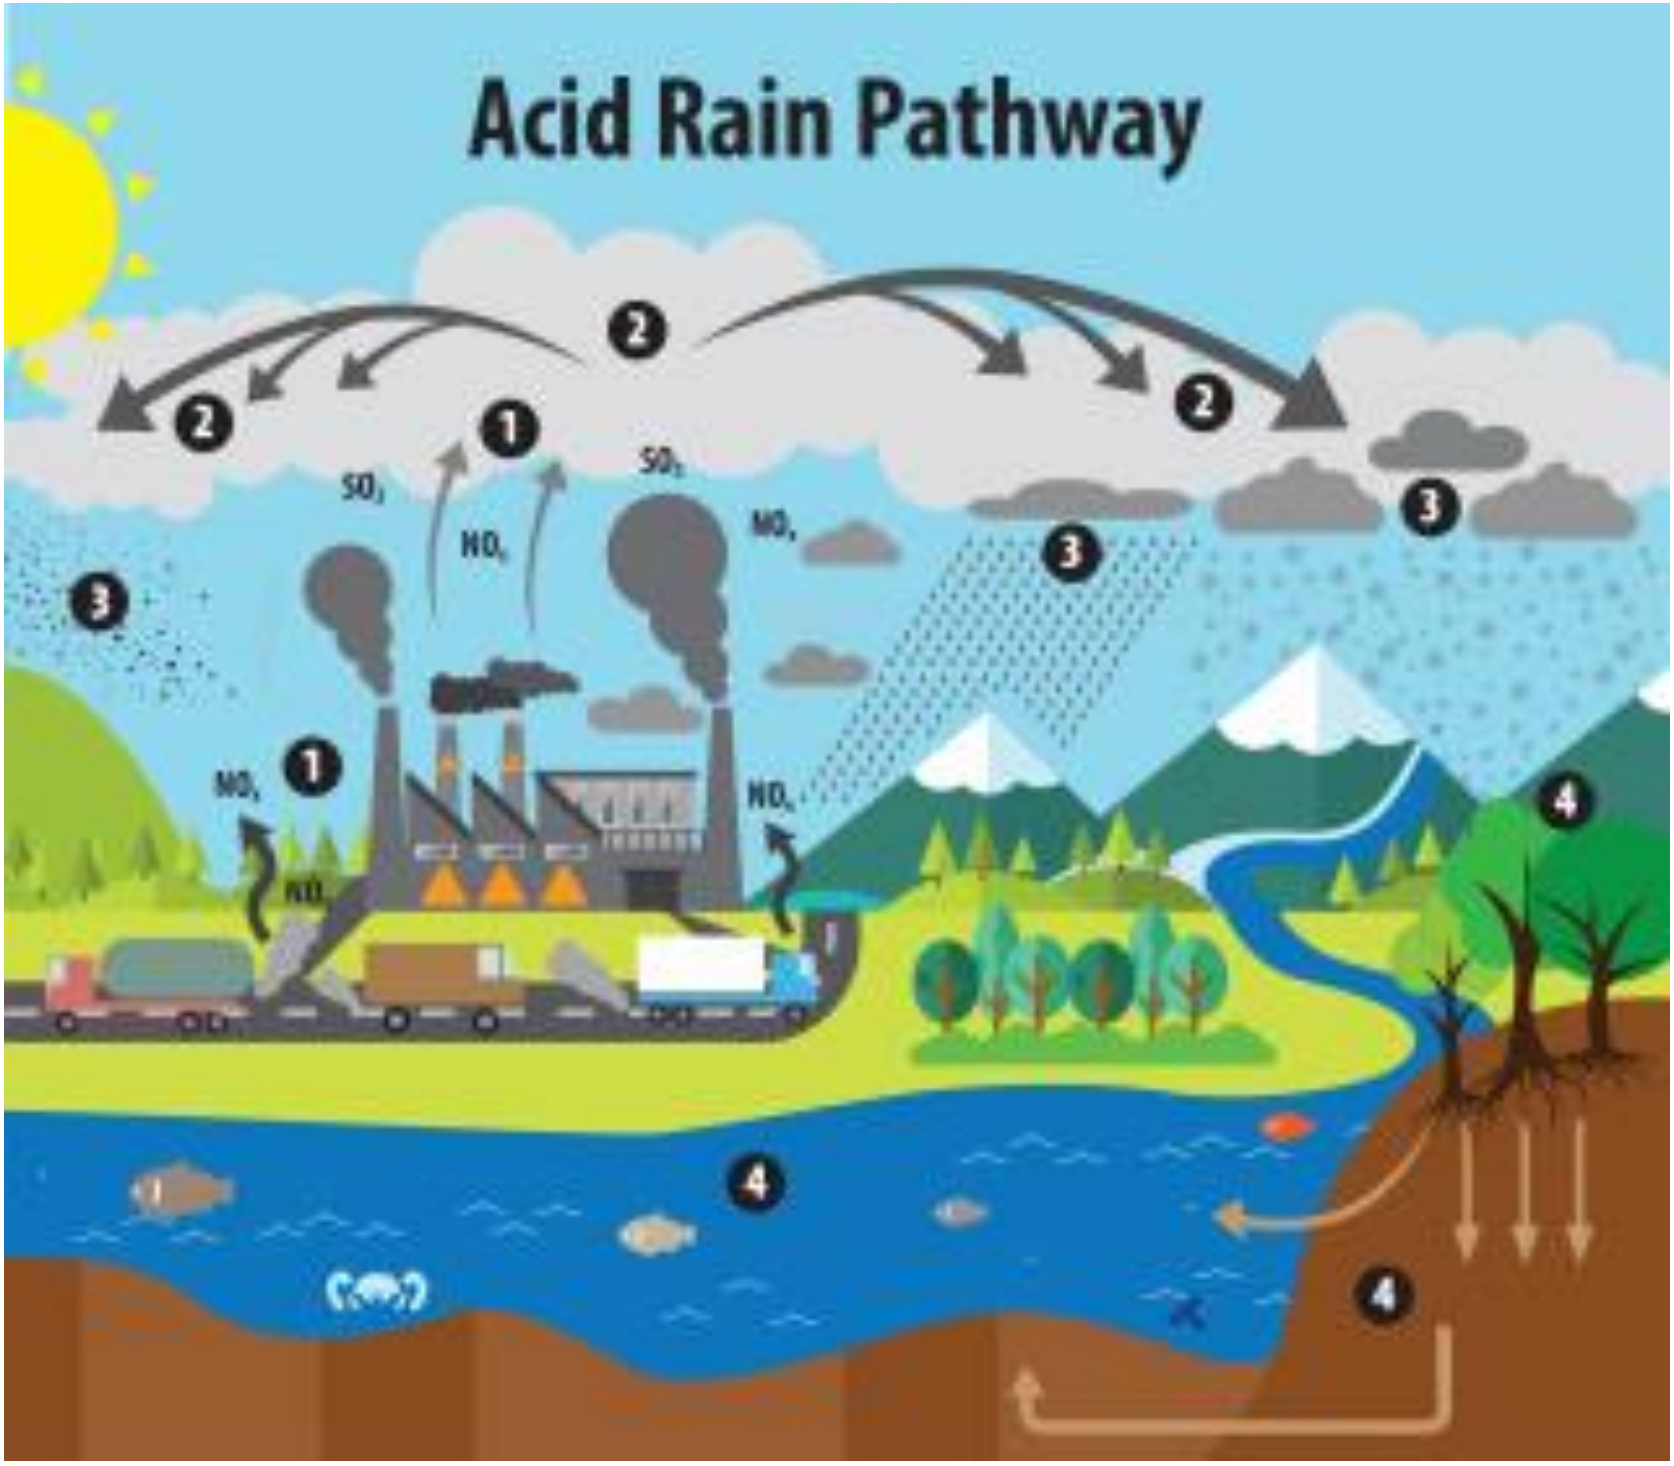

At school, Sipho told his teacher how they had tried to help MaZaca and what had happened next.

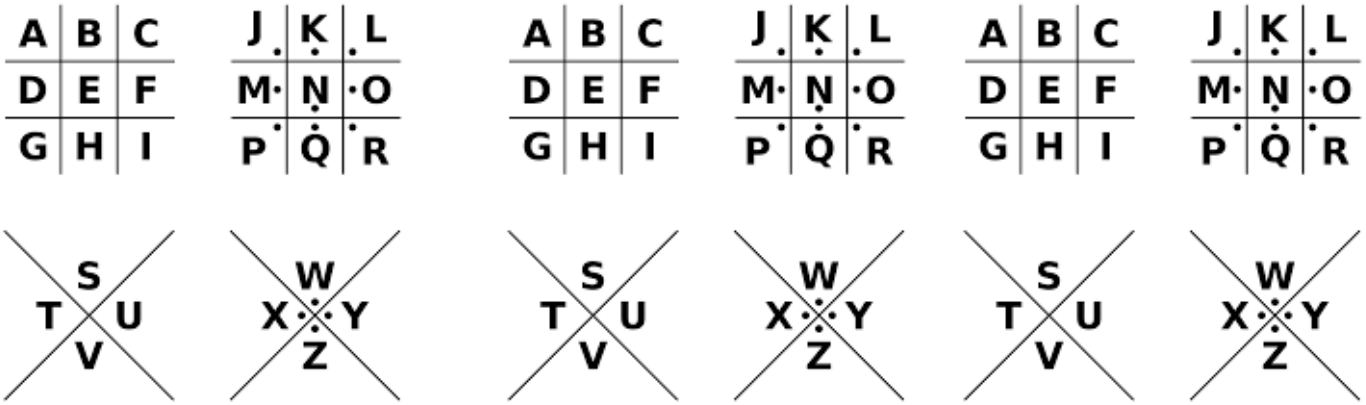

Akela said, "It was very kind of you to pull out the weeds to say thank you. But didn't you know that it is the roots of plants and grass that hold the soil in place? When a person removes weeds, grass, or plants, the rain and wind can wash or blow the loose soil away. We call this **soil erosion**."

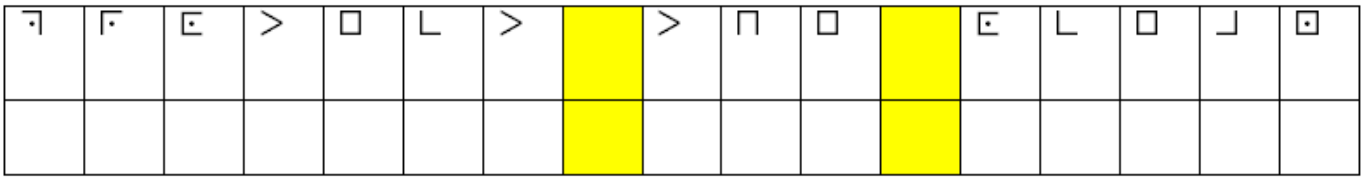

"How can we help now?" Sipho asked.

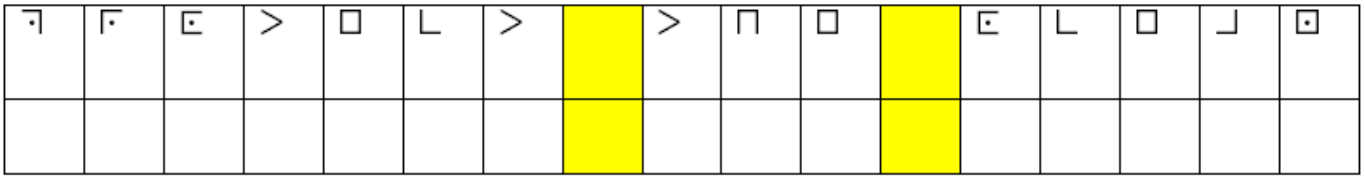

"I know a good African way," said Akela. "Perhaps we can all work together."

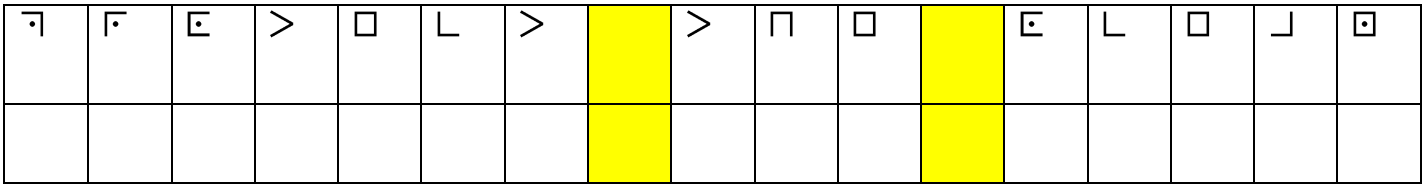

What do you think Akela's idea was?
