Pack programme for 12 June 2026 **Voyagers of the Blue & Green Seas**

GUARDIANS OF THE SEAS

Time	Activity	Equipment	Scouter
16:30 (20 min)	Grand Howl **All say the Outdoor Code (I will do my best to keep the countryside, roads and ocean free of litter)** **Membership - Mowgli's Brothers** Duty six: Red Inspection	Skin, flag, Totem pole	Akela
As sailors we spend a lot of time sailing the seas. We see lots of marine life and we have become their guardians. If we don't look after them, who will?			
16:50 (10 min)	**ACTIVE GAME**:(Relay style) Instruction:3 types of pollution **Natural** eg. Mud/unhealthy bacterial growth, sewerage (throws out the ecosystem) **Chemical** eg. Oil/insecticides, chemicals (use Oros) **Litter** eg. Plastic, rubbish In sixes, tied like a three legged race with their scarves, Cubs fetch one of the items to pollute the water in their basin. 2x4 items equals 8 cubs if less a pair can go twice.	1 Soil 2 Oros 3 Oil 4 Plastic bits/trash Buckets half filed with water	Athena Parade ground
Well done for doing your best to fight the pollution. But pollution is a reoccurring event. How else can we protect the ocean?			
16:50-17:40 (10 min and 2 min rotation)	**Base 1 - show plastic pollution items – single use plastic** What is it - where does it end up - in the sea - how does it affect the animals in the ocean,lakes etc. **Short game:** number the Cubs in pairs from 1 upwards. An assortment of discarded plastic items. On the floor between the teams, place a bundle of discarded plastic items It can consist of plastic bags, straws, bottle tops, etc.When you call a number, the 2 Cubs with that number need to try to snatch an item.	Plastic items : -Straw -Plastic cutlery -plastic bag - plastic water bottle - chips pack/choc wrapper Pictures of animals stuck in plastic.	Athena Hall West side
	Base 2 : Oil pollution: aren't an easy fix, Cubs make a filter. Cubs use the polluted water from the steam release game and pour it through the filter, this shows how a filter can't remove all oil and chemicals (oros), nd that our pollution do not always have a quick fix.	Oil, bowl of water, picture of animals stuck in oil Filter items: 2L bottle, sand, gravel, pillow stuffing, charcoal.	Orsella Outside

	Base 3 - over fishing Magnetised fishing rods with bottle cap fish. Fish until there is only one of each species left – how will they make babies? **Short yarn about the two endangered species:Attached**	Table on it's side. Magnetic fishing rod, endangered fish and sea creatures with paper clips.	Ryan, Scout to relief at 17:25 Hall west side.
	Base 4 - coral damage Show pictures of coral reef, play 3 min video - why do reefs matter **?** ● They protect coastlines from waves, storms, and floods, reducing property damage and loss of life. ● Coral reefs provide nutrient recycling and assist in carbon and nitrogen-fixing, which supports marine life. ● They serve as a habitat for diverse marine species, contributing to biodiversity. They play a vital role in maintaining the health of the ocean, which is essential for the planet's overall well-being. People also depend on their livelihood from coral reefs.	Pictures of coral reefs- healthy and dead Piece of coral. Laptop for video. Paper roll and crayons – to draw coral reef as a communal project.	Michelle Hall in front of kitchen.
17:55 5 min	Closing grand howl Hand out badges – Edward shield Do attendance register	Totem pole Skin Badges Attend register	Akela

BASE 4

BASE 1

Why is plastic litter bad for humans? (You can use the items of the single use plastic grab game as props for your facts if you wish?)

BASE 1

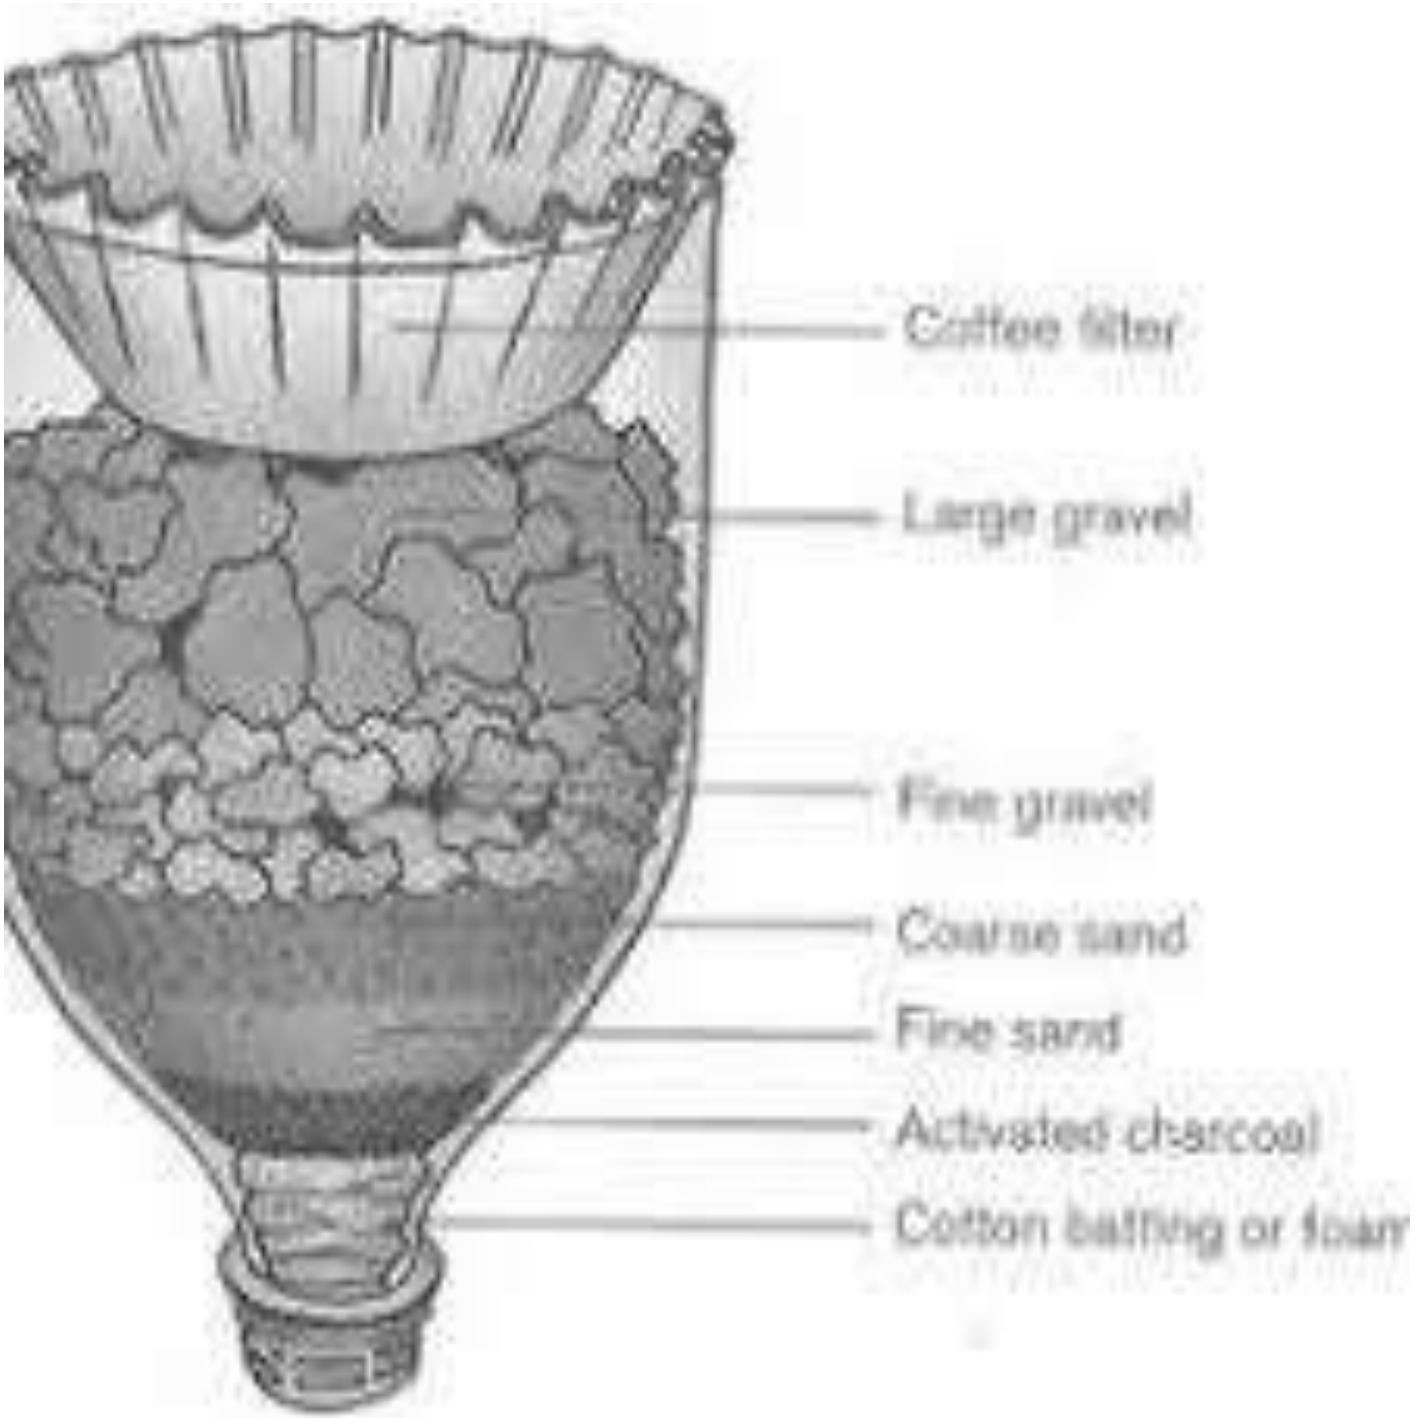

Surely the one *chip packet* you litter, or *bottle of wate*r you drink with a *straw* can't be that bad… can it? All these small plastic items add up to a huge problem!

These plastic particles affect every part of our oceans. It's contaminated the darkest reaches of the Mariana Trench, over 10km deep. It becomes frozen into icebergs and Arctic sea ice. Plastic is even affecting volcanoes, creating new rocks that are going to scar our world for millions of years.

- **There are 51 trillion pieces of plastic in the ocean – that's more than 500 times the number of stars in the galaxy!**
- 8 million tons of plastic dumped in the ocean every year.
- Half of all plastic is used only once and then thrown away!
- Every year, we throw away enough plastic to go around the world 4 times!
- Less than 5% of plastic is recycled.
- Every minute, 1 million shopping bags are used and then thrown away.

  South African's alone use 8 billion shopping bags a year – that's 160 bags per person!
- Globally, more than 100 billion single-use cups are used a year.
- Hundreds of billions of plastic straws are used each year – the USA alone throws out half a billion a day!
- More than 100 million disposable bottles are consumed every day. Considering that South Africa is a water-stressed nation, three liters wasted for every one litre bottled is not a fact we are comfortable with.
- 40 billion plastic knives, forks and spoons are used a year – none of these can be recycled.

BASE 2

A homemade water filter

BASE 3

marine insight

10 ENDANGERED OCEAN SPECIES & MARINE ANIMALS

STELLER SEA LION

Eumetopiasjubatus

Its population has declined by more than **60%** due to natural & human threats since the 1960s.

KEMP'S RIDLEY SEA TURTLE

Lepidochelys Kempii

It is endangered by the **rarest and smallest sea turtle.**

FIN WHALE

Balaenopteraphysalus

The global population of Fin Whale ranges from below **~75,000**

HECTOR'S DOLPHIN

Cephalorhynchushectori

the estimated population of hector's dolphins are **55**

HAMMERHEAD SHARK

Sphyrna Mokarran

This species of sharks are critically endangered with population around **200**

HAWKSBILL TURTLE

Eretmochelys Imbricate

Their population has declined by **80%** over the last century.

HAWAIIAN MONK SEAL

Monachusschauinslandi

Only **1,400** Hawaiian Monk Seal remains on the Islands.

GREEN SEA TURTLE

Cheloniamydas

The **loss of sandy beaches and careless fishing** have reduced their population.

BLUE WHALE

Balaenoptera Musculus

The largest living mammal on earth with global population **10,000–25,000**

VAQUITA

Phoeocna Sinus

They are the world's smallest and critically endangered cetaceans. **There are fewer than 10.**

marineinsight.com

BASE 3

1. ***The Blue Whale*** 

(You can spot this big blue giant right in the middle!)
The Ultimate Giant: The blue whale is the biggest animal to ever live on Earth—it is even bigger than the largest dinosaur! Its tongue alone weighs as much as a whole elephant.
Super Loud Singers: They make the loudest sounds of any animal on the planet. Their underwater songs are so deep and loud they can be heard by other whales hundreds of miles away.
Why They Need Our Help: A long time ago, people hunted them too much. Today, they are protected, but they still need help because they can accidentally get bumped by big cargo ships or get tangled up in old fishing nets.

2. ***The Small tooth Sawfish***

(Look just above the blue whale to find this one with the crazy nose!)
It’s a Secret Ray! Even though it looks like a shark, a sawfish is actually a type of ray (like a stingray). If you looked underneath its body, you would see its mouth and gills hidden on its belly!
The Hedge-Trimmer Nose: That long, toothy nose is called a rostrum. It acts like a metal detector to find fish hiding in the sand, and then the sawfish waves it around like a sword to catch its dinner.
Why They Need Our Help: Because their noses are so bumpy and toothy, they easily get tangled up in fishing nets by accident. They also love to live around coastal mangrove trees, and as those trees are cut down, the baby sawfish lose their favorite hiding spots from bigger predators
