Date: 7 August 2026

Knot an Emergency

Duty Six: Green

Time	Duration	Description	Equipment
17:30	10	Cubs arrive Duty six sets up council rock	
17:25	15	Grand Howl **Cub Law:** The cub gives in to the old wolf, the cub does not give in to himself /herself. - Ask one cub to explain what the law means **Inspection:** Uniform, Paws and Claws	Equipment: Bones
Astronauts have to be fit to handle all the demands of space…lets test our fitness			
17:40	15	**ACTIVE GAME:** Astor Work Out Use cones, ,hoops, balls, to set up a workout circuit .	Cones, balls, hoops
Besides physical strengthen they also have to be agile and quick to respond			
17:55	10	**Reflex grab** • Cubs line up shortest to tallest, split into two teams • Cubs stand in two lines facing each other, holding hands • The cubs furthest from the bean bag also hold hands so that it now becomes one long chain. • Identify which cub is in the centre of the chain and have that cub SIMULTEANOUSLY squeeze the hands of the two cubs on either side • The cubs whose hands were squeezed then squeeze the hand of the person next to them • The squeeze is passed on until it reaches the last two cubs who are closest to the bean bag • Once the hands of the cubs at the end of the line are squeezed, they grab the bean bag. • Aim of the game is to grab the bean bag first This reflect game remind us of being punctual. Why must we be punctual. **It is not polite to be late and that being late is giving in to themselves, as with a little effort they can always be on time.!!**	Bean bag, on a table or chair
It was such a mission rescuing our buddies who got stuck outside the space station, knots kept coming loose, let's brush up on these skills			
18:05	20	Bowline, Slipe Reef knot	String, knotting board, glue
Last time we rescued some friend who got stuck out on a space walk, oh no it turns out they got caught in a meteorite shower and suffered some injuries			
18:25	30	**First aid response** • One person got burnt • One person got a gash on their leg • One person got stung by a space bee • And Jojo got a nose bleed Each six assigned one of the emergency situations, discuss, create a skit or song to show how they would respond Because astronauts have to keep a good record of events on the space station, use the 24hour clock to Indicate time that the space incident happened, how long it took to respond and treat the ***cub-stronaut . Use the knots*** you practiced to help your injured cub-stronaut	Props needed by cubs

Its been so much fun here in space, lets tell other cubs around the world what we are up to			
18:55	20	**Write to cubs around the world (beginning of GW task 32)** - Each six to write a letter to cubs around the world	
19:15	5	Grand Howl Ask GW cub to say own prayer	

Achievements Silver Wolf	Achievements Silver Wolf
Task 29 : Take part in play acting with your Six	Task 30: Write a Song or poem
Task 46: Slip reef knot	Task 53 : Make and use a Bowline
Task 67: Cut and graze treatment	Task 73: Burns, scalds, etc
Task 68 Show how to treat a bleeding nose	Task 74: Stop bleeding
Task 71 Importance of being punctual	Task 75: 24 hour clock

How to remove a splinter

- It is quite easy to remove a thorn or splinter with a good pair of tweezers.
- But if the whole thorn or splinter is buried under the skin, you should not try to remove it. Never dig around in the wound with a needle or tweezers. Let the adult decide what to do.
- When you have pulled out the splinter or thorn with the tweezers, wash the wound with ordinary soap and water. Never apply ointments or antiseptics.
- A clean dressing such as an adhesive plaster, should be used to cover the wound.

How to treat insect bites and stings

- Bites from ticks, fleas and mosquitoes can be very itchy and sometimes painful. Usually these bites are harmless and there is little you need to do, apart from trying not to scratch them. Cold water or ice can relieve the pain. Tell an adult that you have been bitten.
- The sting of a bee, wasp or scorpion can be very painful. Remove the sting as fast as possible because the poison keeps pumping out for quite some time after you have been stung. The secret is not to squeeze the poison sac. Hold the blunt end of a knife, match stick or credit card as near to the skin as possible and scrape the sting out gently. A cold compress will relieve the pain and swelling, but remember to show an adult what you have done as soon as possible.
- Some people are allergic to bee or scorpion stings. The allergic person will know that they may be in danger and usually, what should be done. They need skilled medical attention as soon as possible. Their face and eyelids may begin to swell, or they may feel dizzy and have difficulty in breathing. The sting area may begin to swell. Take the Cub to hospital or a doctor without delay. SO GET ADULT HELP - FAST.

How to treat burns and scalds

- A minor burn or scald could be on the fingertip or a very small burn on the body. The skin usually gets red and is painful. (Sunburn is also classed as minor burn).
- Gently place the burn area in cold water, or under a running tap, for about ten minutes.
- Never apply ointment or antiseptics.
- Do not try to break blisters.
- If cold water is not available, cover lightly with a clean, dry dressing.
- Do not attempt to treat anyone who has been badly burned but do cool the burns down with cold water and call for help.

How to stop bleeding by using direct pressure

- NEVER TOUCH a bleeding wound on anyone except yourself, unless you have your hand covered by plastic gloves or a plastic bag.
- Remember to wash your hands before treating a cut on yourself.
- With a cloth or handkerchief folded, apply pressure on the wound with your fingers flat together.
- Check if the bleeding has stopped. If not, apply pressure again.
- Cover the wound with a clean cloth, or a dressing if you have a first aid kit handy, and tie gently around the injured part, using a reef knot to tie the ends.
- If the person needs to go to hospital, an adult will take over.
- Remember when removing your glove or plastic bag to take if off in a way that it is inside out, leaving the blood inside the glove or bag.
