Heli Rescue 26 July 2026

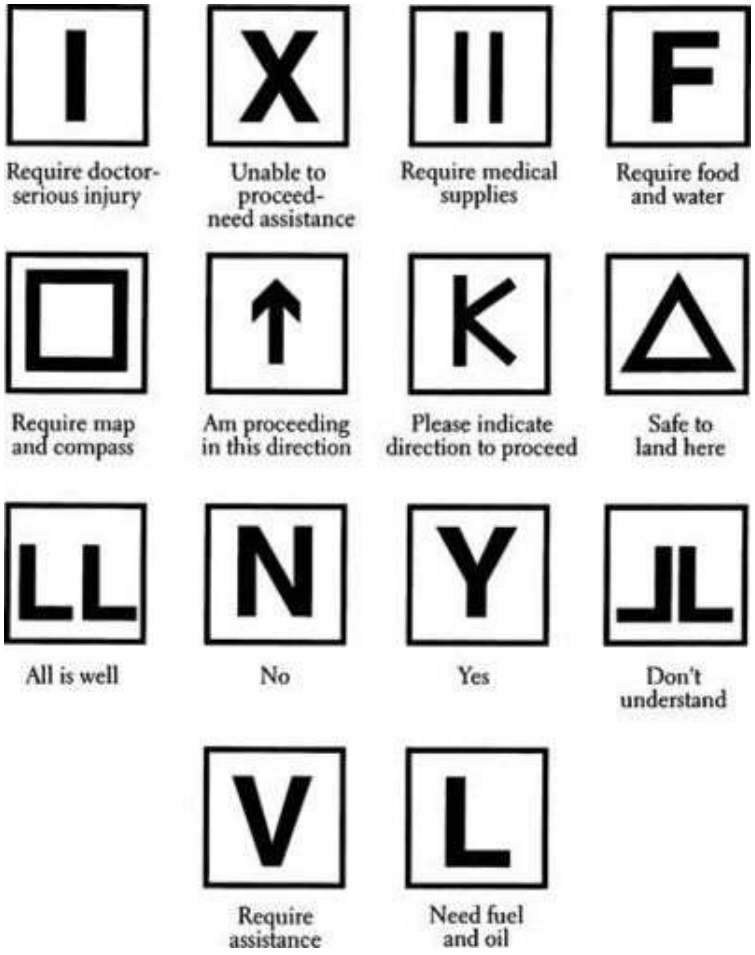

GW: Three ways of making distress signals

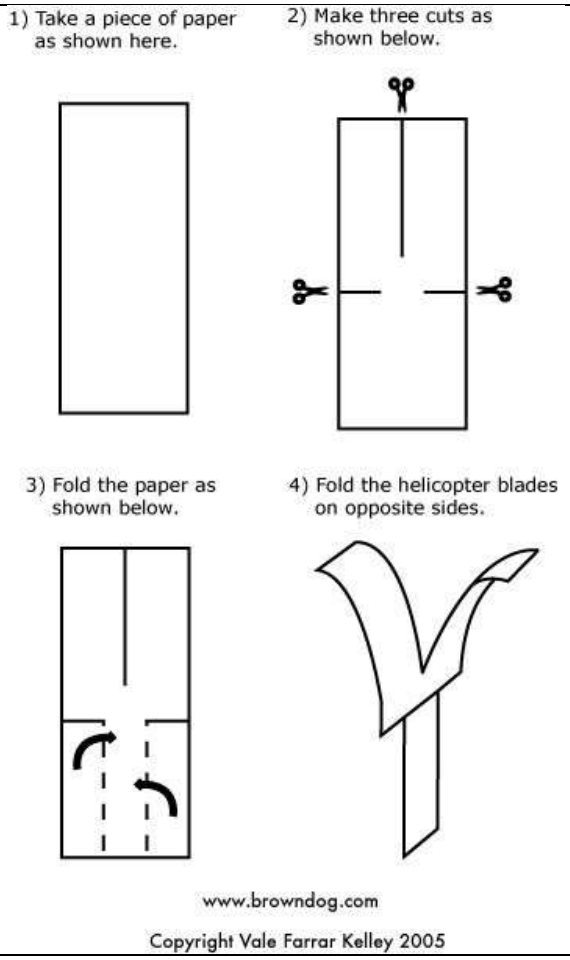

Time	Activity	Equip.	Notes
5:30	Grand Howl	Totem, skin, prayer book, flag	
5:35	Inspection	Beans	Full Uniform: 3 for perfect, -1 per incorrect item, min 1.
Today we're rescue helicopter pilots. Our job is to rescue people. We're returning to base when the fog closes in. It's impossible to see where we're going, so we need our radar system to help us navigate.			
5:40	Heli Radar	Blindfolds	Relay formation, 2 teams Sixes line up in files with their Sixers about 10 metres ahead of them. The first Cub in each Six is blindfolded. The Sixers then change places and proceed to call the blindfolded Cubs by their Six name, that is, bringing them in by radar. The first Cub - 'helicopter' - to 'fly' home scores two points, the second three points and so on. The next Cub is blindfolded, the Sixers change again and the game proceeds until all the 'helicopters' are safely home.
Before we set off on our next mission, we need to practice ways to send distress signals. On a sunny day, a mirror is your best signalling device. You can use a signalling mirror to make signals using the reflected sunlight. The flashes of sunlight create a very strong signal which can be seen from a long distance. You can buy an actual signalling mirror, but you can also use a normal mirror, a CD / DVD, or any reflective surface as long as it is flat (curved surfaces do not work). Signalling using a mirror takes a bit of practice. If you don't have a mirror, a cellphone screen will work. You can also try another smooth, flat surface like a plate or a similar object that will reflect the sun's rays. 			
5:50	Mirror Distress Signal Soccer	CD Torch Hula Hoop	Each Cub takes a turn trying to reflect the torch light into the middle of the hula hoop.
Another way to send a distress signal is with a fire.			

During darkness, fire is an effective visual means for signalling. Build three fires in a triangle (the international distress signal) or in a straight line with about 25 meters between the fires.

When constructing signal fires, consider your geographic location. Find a natural clearing or the edge of a stream where you can build fires that the forest will not hide. You may even have to clear an area.

A burning tree (tree torch) is another way to attract attention. Always select an isolated tree so that you do not start a forest fire and endanger yourself.

6:05	Sweet Fire	Popcorn Sweets Serviettes	Cubs make a fire using popcorn as rocks, candy floss tinder, other sweets for sticks, Boudoir biscuits for logs, and cheese curls for flames.
Good job rescue pilots. Now we know two ways to make distress signals. The dispatcher just called, and we have to suit up and go recue some hikers who are stuck in the mountains.			
6:20	Ground to Air Emergency Signalling Code Play Acting	Signalling Strips / Sleeping Bags Prompts Backpacks Hiker hats	Pairs of Cubs each try making a sign on the far end of the hall. The rest of the Cubs (the heli pilots) try to read the signs from their vantage point on the stage. 

6:35	Helicopter Craft	Cut outs Scissors Paper Clips	
6:45	On a Heli Journey	Pencil & Paper	The Cubs try to spot something beginning with each letter of the alphabet. These must be written down in alphabetical order and nothing beginning with B may be spotted until A has been noted.
6:55	Grand Howl	Flag, rock, totem	1. **Cub Fun Day** is this Saturday. Remember to come dressed as a pirate with your scarf, or in full uniform. 2. **Paint Park Runs Purple** is next week Saturday, 1 August. I will send more information to your parents soon. 3. Collect **2L Bottles** for Claire's Springbok Project. 4. **Skies Badge.** Remember to finish your **Pinhole Planetariums** and show me, or ask your parents to send a photo to me. You also need to complete one more part of the badge at home, and the details of the badge are in the Cub Parent's WhatsApp group.

Rescue Scenarios

1. You friend fell and hurt themselves very badly.
   Tell the rescue helicopter that you “need a doctor because of serious injury.”

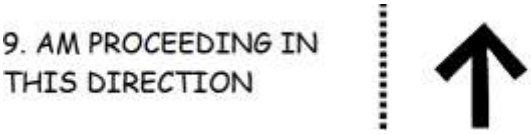

2. The bridge ahead was destroyed by a flood, and the path behind you is also flooded. You can’t keep going forward, and you can’t turn back.
   Tell the rescue helicopter that you “can’t proceed.”

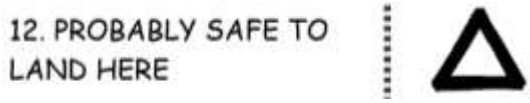

3. You are stuck on a mountain and have run out of food and water.
   Tell the rescue helicopter that you “need food and water.”

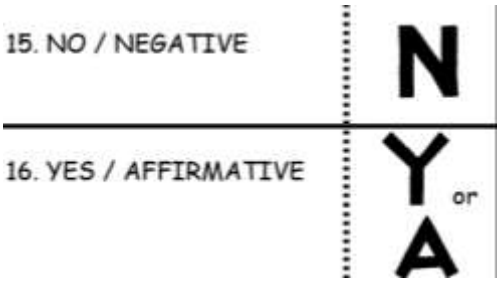

4. You are standing on a hill, looking over a forest. You can see a clearing.
   Tell the rescue helicopter that you will be “going in this direction.”

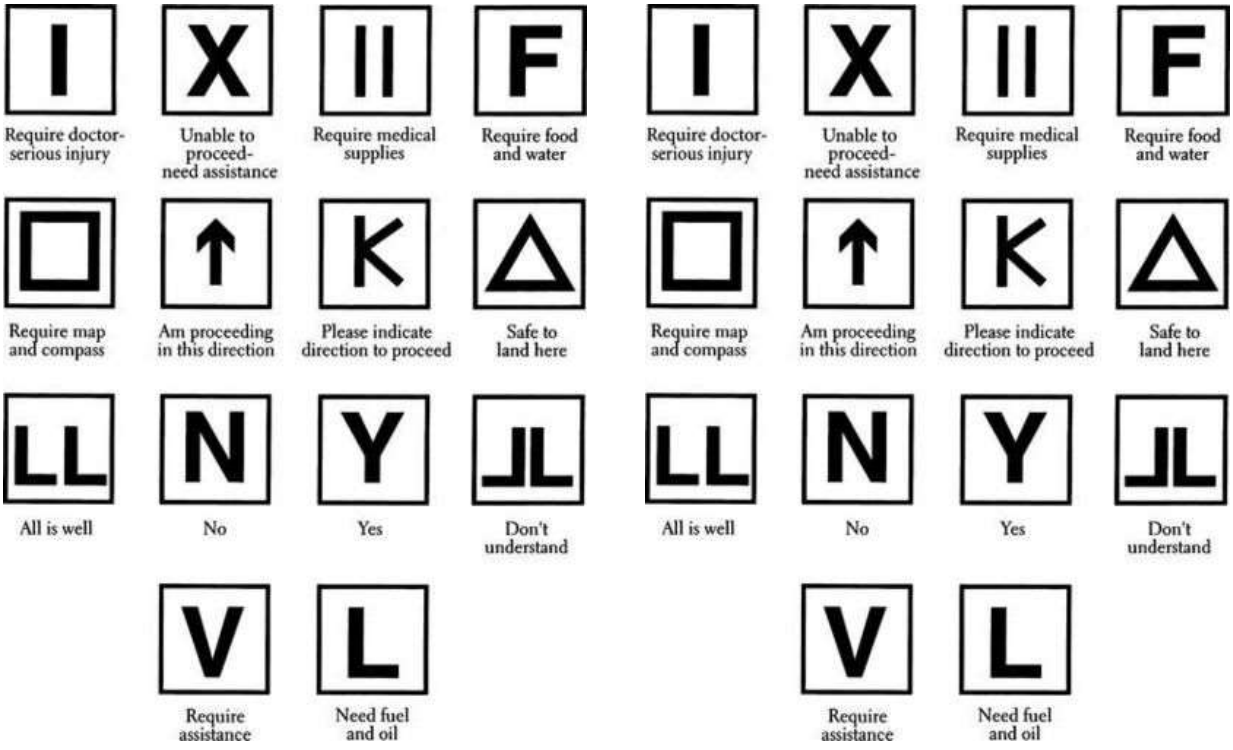

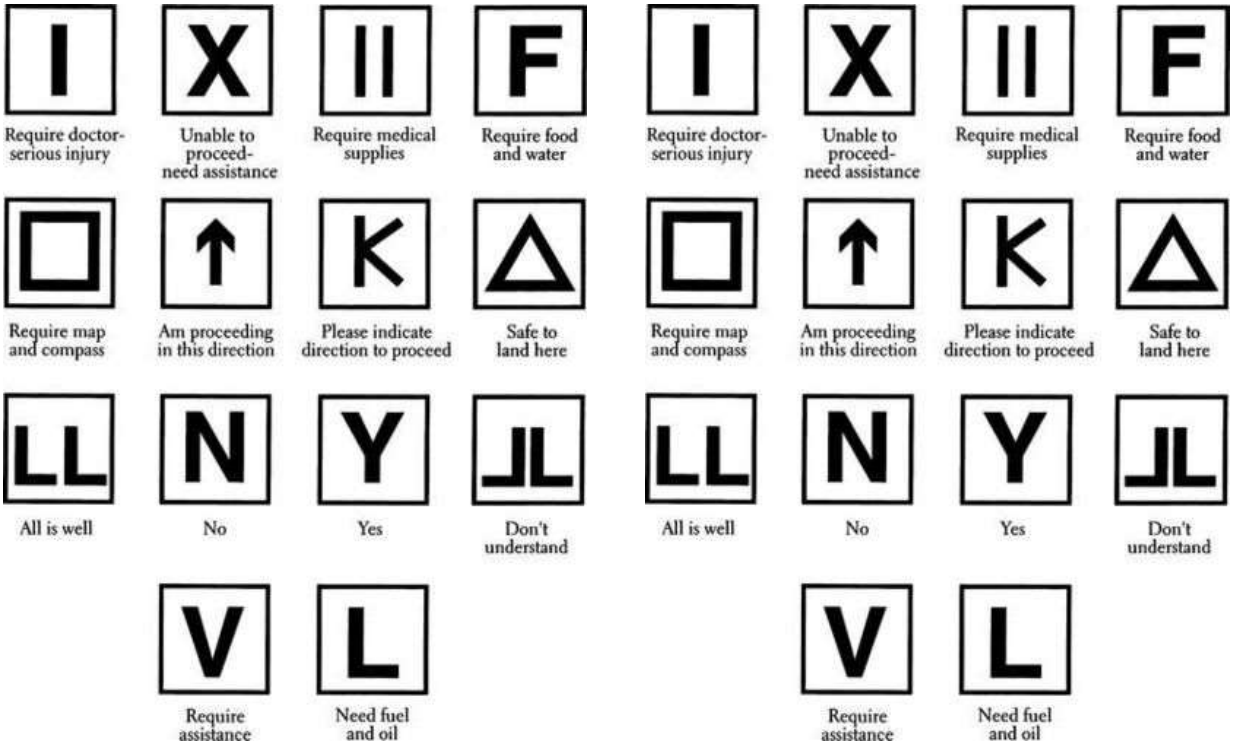

5. You’re standing in a field. There are no trees nearby, and the field is flat.
   Tell the pilot “it’s probably safe to land here.”

6.

I
Require doctor-serious injury
X
Unable to proceed-need assistance
II
Require medical supplies
F
Require food and water
Require map and compass
Am proceeding in this direction
K
Please indicate direction to proceed
Safe to land here
LL
All is well
N
No
Y
Yes
Don't understand
V
Require assistance
L
Need fuel and oil
